My prototype gives the option for a new user or a returning user.

If the new user button is selected the user enters a username (if available) a password, then the student's first and last name.

If there is an account already established the user enters the username and password to take it to the main screen.

 From the main screen the user has two options, to check the balance, or to add money.

When the add money button is clicked, it will ask for a credit card. After they are given the option to add as much money as they want either in $10, $20, $50, or $100 increments.
